

FP&A Revenue Dashboard

An interactive Excel dashboard for tracking Budget vs. Actual performance across regions and departments — built to mirror board-ready reporting delivered at Dhamecha Group (UK FMCG Cash-and-Carry Distribution).

Overview

This dashboard tracks 18 months of revenue performance (Jan-25 to Jun-26) across 4 UK regions (London, Manchester, Birmingham, Leeds) and 4 business lines (Retail Sales, Wholesale, Online Sales, Foodservice), with dynamic filtering and automatic variance flagging.

Key Features

- **Interactive filters** — dropdown selectors for Region and Department instantly recalculate every KPI and chart
- **Live KPI cards** — Total Budget, Total Actual, Variance (£), and Variance (%) with automatic green/red conditional formatting
- **Monthly trend chart** — Budget vs Actual line chart that updates with your filter selection
- **Regional performance comparison** — bar chart benchmarking all 4 regions side by side
- **Revenue mix breakdown** — pie chart showing department contribution to total revenue
- **Automated insights** — formulas surface the best-performing region, the region needing attention, and the top revenue department without manual lookup

Tools Used

- Excel (SUMIFS-driven dynamic filtering, Data Validation dropdowns, conditional formatting, native charts)
- Formula-based architecture — no macros, no VBA — so it's portable and easy to audit

Files

- `fpa-revenue-dashboard.xlsx` — the full interactive dashboard (open the **Dashboard** tab and try the filters)
- `revenue_budget_data_gbp.csv` — underlying dataset (288 rows: 18 months × 4 regions × 4 departments)

How to Use

1. Open `fpa-revenue-dashboard.xlsx` in Excel
2. Go to the **Dashboard** tab
3. Use the Region and Department dropdowns (cells C5 and F5) to filter — all KPIs and the trend chart update instantly
4. Regional comparison, department mix, and insights reflect the full dataset regardless of filter, for a always-visible big-picture view
